

# Panel cutting jig for 2 LEVEL-it®'s – Plan

Need to cut plywood or other sheet goods?  
Here's a table top jig that you use with 2 LEVEL-it®, a circular saw and a circular saw guide. You can crosscut or rip any large sheets of building material. Build it yourself from some 7/16" Oriented Strand Board (OSB), standard 2 X 2's and a few screws. Amazingly useful!

Always work safely. Power tools can be dangerous.
